

## Work Completed

### The Project Team successfully completed the following work:

- **Pilot Projects:** Oversaw three formal Pilot Projects to develop water marketing principles by employing Utah’s Water Banking Act. These efforts produced an approved Contract Water Bank in the Price River Basin, a storage rental pool agreement in the Cache Valley area, and the installation of six telemetry sites along East Canyon Creek to assist with future water marketing in the Snyderville Basin. The Project Team added a fourth Pilot Project in the Vernal area, which was approved as a Statutory Water Bank.
- **Community Conversations:** Consulted with dozens of water users generally interested in water marketing concepts. In addition to the four Pilot Projects, the Project Team discussed specific inquiries about using the Utah Water Banking Act to create a water bank in southern Utah County, Iron County, Grand County, Salt Lake County, and Emery County.
- **Developed Milestones:** Distilled the lessons learned into sequential Water Marketing Milestones to orderly guide a water marketing discussion, identified helpful water marketing strategies, and created numerous guides and materials housed on an interactive website. These materials include videos on key issues, a Foundational Questions exercise asking specific questions needed to develop a local water market, and reference tables of marketing methods and transaction types.
- **Created Application Materials:** Developed the means to employ the Utah Water Banking Act, which is one form of water marketing. The Project Team, in conjunction with the Division of Water Resources, created formal water bank application forms and an approval process for both Contract Water Banks and Statutory Water Banks and drafted helpful checklists and questionnaires to assist water users in developing a water bank under the Water Banking Act.

These work products are available on the [Utah water marketing website](#).
