

Comment #	Original BLM Comment	Original UDWR Response	UDWR March 31, 2017 Response	Additional BLM Comment	BLM Reviewer	UDWR Updated Response
BLM General 10	3rd line of 1st paragraph [Section 5.2.2 in PLP]: it isn't just "Commission staff" that identified resources potentially having cumulative impacts. It would also be cooperating agencies such as the BLM (it is up to us to determine what resources could be cumulatively affected since we are the land managing agency). 3rd line of 2nd paragraph: "Temporal scope of the cumulative effects focused on the use of Colorado River water or alternative water supplies" ... cumulative effects could also occur from construction and operation of the LPP facilities, not just from water use. Please revise this discussion accordingly.	Comment was not included in the table of responses, so it was not addressed.	<p>The cooperating agencies are added as identifying resources as having potential cumulative effects. The second sentence in the first paragraph of Section 5.2.2, Chapter 5, Exhibit E of the License Application, which was filed on May 2, 2016 and which replaces the PLP, is revised to read: For any resource that FERC staff and cooperating agencies identify as potentially having cumulative effects, the temporal scope will look 30 to 50 years into the future, based on the potential term of a new license and ROW grants, concentrating on the effect on the resource from reasonably foreseeable future actions.</p> <p>The second sentence in the second paragraph of Section 5.2.2, Chapter 5, Exhibit E of the License Application is revised to read: The temporal scope of the cumulative effects analysis is focused on: 1) the use of Colorado River water or alternative water supplies in the KCWCD and WCWCD service areas to meet municipal and industrial (M&I) demands from 2025 through 2060; and 2) construction and operation of the LPP when combined with the resource impacts of other projects from 2025 through 2060.</p>	1st paragraph - insert "past, present and" before "reasonably foreseeable".	Lorraine Christian	<p>The cooperating agencies are added as identifying resources as having potential cumulative effects. The second sentence in the first paragraph of Section 5.2.2, Chapter 5, Exhibit E of the License Application, which was filed on May 2, 2016 and which replaces the PLP, is revised to read: For any resource that FERC staff and cooperating agencies identify as potentially having cumulative effects, the temporal scope will look 50 years into the future, based on the potential term of a new license and ROW grants, concentrating on the effect on the resource from past, present and reasonably foreseeable future actions.</p> <p>The second sentence in the second paragraph of Section 5.2.2, Chapter 5, Exhibit E of the License Application is revised to read: The temporal scope of the cumulative effects analysis is focused on: 1) the use of Colorado River water or alternative water supplies in the KCWCD and WCWCD service areas to meet municipal and industrial (M&I) demands from 2025 through 2060; and 2) construction and operation of the LPP when combined with the resource impacts of other projects from 2025 through 2060.</p>
