

Weber River Basin Reservoir Storage (Apr 7, 2022)

Note: Due to recent changes of calculation methods for reservoir storage volumes in the Weber River Basin, comparisons of current levels to past year's may present inaccuracies. The Division of Water Resources is actively developing a method to adjust the data for accurate historical representation.

Note: As of March 2022, reservoir level charts will compare current levels to 1990-2020 median levels. The shift from average to median provides a more accurate reflection of climatic trends. More information regarding this change can be found in the NRCS Utah Snow Survey and Water Supply Forecasting's *Special Report on Updated Normals*.
